

Saves Time. Saves Money. **Guaranteed.**

SITEOPS® is revolutionary patented software for commercial land development. Our CAD-compatible web-based system reduces the time and cost required for land development design and planning.

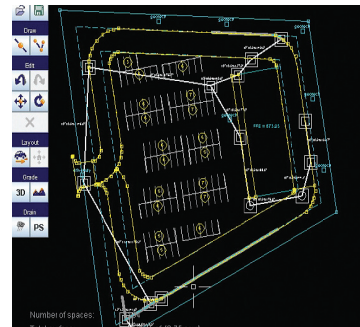

To get started, purchase a **Single Pad** or **Multi Pad** project and log in at www.siteops.com. Upload a file with your site's topography and property line, and import or draw building footprints. Review and revise global project constraints and costs as needed. Finally, submit your project to the SITEOPS optimization engine.

Layout

Grading

Piping

In less than 24 hours, SITEOPS considers up to 10 billion combinations of layout, grading, and drainage design options, working within your constraints.

It delivers three to five optimized preliminary site designs in .DWG format, with 30 layers of information and an .XLS takeoff cost report.

Our patented land development software:

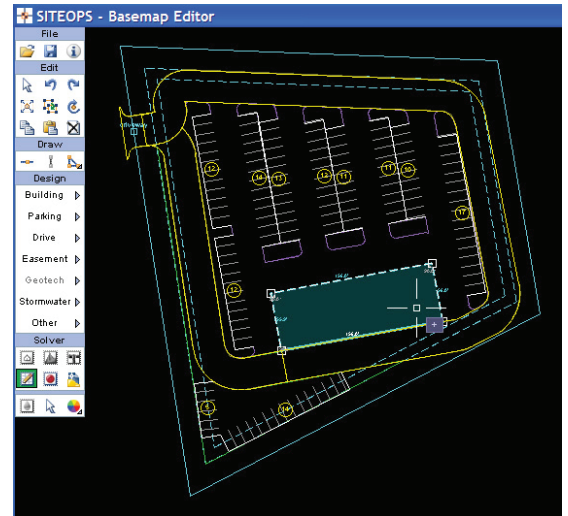

- analyzes the layout for the most cost-effective location of the building footprint
- considers easements and landscape areas
- generates the Finished Floor Elevation
- generates basic stormwater drainage plans
- auto-draws parking lots, curbing and truck drives
- auto-draws retaining walls
- produces an optimized grading plan including the proposed finish and sub grades
- provides an online collaboration hub for all project design participants
- enables document sharing and revision management

Introducing our newest product...

SITEOPS® Design SP

Land developers, architects, and civil engineers can use SITEOPS Design SP to conduct rapid site selection assessments and conceptual layouts, determining whether a building and parking are feasible on a single pad site.

SITEOPS Design SP features the powerful drawing tools from full-version SITEOPS, including the ability to auto-generate and count parking spaces. Layout changes are a snap: move a building or a driveway, and watch as the system quickly redraws parking islands, drives, and more.

Engineers: develop site plans and new business opportunities with SITEOPS® Certification

Demand is rapidly growing for civil engineers who are proficient in SITEOPS®, online CAD-based land development software. We offer a training and certification program to help firms and individuals unleash the capabilities of this powerful site engineering tool.

Certification begins with a three-day training course on the fundamentals of processing sites using SITEOPS. Training covers Single Pad and Multi Pad, as well as the use of collaborative Online Tools. You will learn how to approach conceptual site designs using SITEOPS, take full advantage of its optimization capabilities, and generate the "Site Cost Options Report" (SCOR), which compares options for a site.

Through the class exercises, you will become highly proficient with the web-based software and can use it to generate conceptual plans and estimates, providing detailed information for selecting appropriate sites and optimizing designs for cost upfront in the process.

Once you have completed the course, you can display the SITEOPS Certified mark along with your business credentials, and can be listed on the SITEOPS website for added exposure. Certification is available for individuals (**Professional Level**) and for firms (**Provider Level**).

Training space is limited.

For program details or to enroll, please contact us at 866.365.3618, ext. 1894 or training@siteops.com.

Because SITEOPS is a hosted web-based Software as a Service solution, there are:

- NO installations
- NO IT support requirements
- NO server hardware purchases

Just use your browser and your local Internet connection to access our revolutionary software.

Software upgrades, service releases, and maintenance are all included. Users designated as system administrators have unlimited access to our support team. Comprehensive training tutorials and a user guide are also provided at no charge. We offer a three-day training and certification program; details are available on our website.

Our Support Team is available via phone and email at (866) 365-3618 and support@siteops.com.

Clients include:

Lowe's Companies, Inc.
Target
American Asset Corporation
Atwell-Hicks
BOHLER Engineering
Buescher Frankenberg Associates, Inc. (BFA)
CLC Associates
The Crown Companies
Georgia Civil
Hawkins Companies
Hendrick Automotive
Land Design

Langan Engineering & Environmental Services, Inc.
Lincks And Associates, Inc.
Little Diversified
McIntosh & Associates
MESH Consulting
Messer Construction
Osborne Company
Perry Engineering
Southern Civil Engineers, Inc.
Tetra Tech Rizzo
Upham, Inc.
Woolpert, Inc.

BLUERIDGE Analytics delivers world-class evolutionary computing software to target markets in large corporate retail, real estate, and the architectural, engineering, and construction (AEC) industries. SITEOPS tackles highly complex business problems that are not currently automated due to their sheer enormity. Using predictive analytics, SITEOPS has the ability to produce cost-optimized solutions with immediate ROI.

SITEOPS has saved clients thousands to millions of dollars per project on grading and other site costs. Contact us to request a free product demonstration.
